ENVIRONMENTAL COMPLIANCE FILE

Date: 10 March 1986

Name: Naval Submarine Base

Location: Kings Bay, Georgia

I.D:

Mission: "To provide support to the Submarine Launched Ballistic Missile System. To maintain and operate facilities for administration and personnel support for operations of the Submarine Force; within capabilities, to provide logistic support to other activities of the Navy in the area; and to perform such other functions as may be directed by competent authority."

Area: 16276 acres

Population: 5046

COMPLIANCE STATUS

Air: In compliance. Air Quality Operating Permit No. 9711-020-9263, dated February 4, 1986, was received from the Georgia Department of Natural Resources. Facility use began in December 1985. Neither the state of Georgia nor the EPA has yet inspected the facility.

Water: In compliance. Potable water is obtained from wells on base which is treated and chlorinated to meet health standards.

WASTEWATER: In compliance. The NPDES permit is current and expires September 25, 1989. This permit governs an activated sludge treatment system receiving waste water from ships. The domestic wastewater generated by the upper base support area is treated by a Land Application System (LAS) and governed by a LAS permit which expires March 15, 1990. No miscellaneous point sources exist. Last date of State of Georgia inspection was July 1985. The findings revealed no problem with either system.

RCRA: In compliance. Part A Permit received 1982. Part B Permit was issued September 28, 1984. Improvements to the hazardous waste storage facility required by Part B permit are complete. The permanent hazardous waste storage facility is scheduled for use in December 1988. The State of Georgia inspected the storage building during May 1985. No negative findings were issued.

CHACLA: CHACLA program replaced by Navy Assessment and Control of Installation Pollutants (NACIP) program. This program is designed to identify and control environmental contamination from past use and disposal of hazardous substances. During 1985, an investigation revealed 16 potential contaminated sites within SUBASE Kings Bay. After the contamination was removed from the sites for proper disposal, all 16 sites were determined to pose no potential threat to human health or to the environment. Therefore, no further action under the NACIP program was recommended for any of the sites.

TOXICS: PCB's are not handled. All PCB transformers have been removed.
Pest Control technicians use toxicants and they dispose of all residues through complete use during application.

PROBLEM AREAS

None at Present

ACTION NEEDED

No action needed

Contact: Mr. Michael Anderson at FTS 970-4620.
